Office Action Summary	Application No. 10/624,474	Applicant(s) RAJEWSKI, ROBERT C.	
	Examiner Mark Rosenbaum	Art Unit 3725	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3,14 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) in view of either deVries or Uno et al. APA is the apparatus discussed on page 1 of the specification. This includes the basic claimed apparatus except for the use of fluid used to suppress explosion potential. Both deVries and Uno et al solve this problem by disclosing similar apparatus including the addition of fluid to the apparatus upstream of a shredder. In order to suppress explosion potential, it would have been obvious for one of ordinary skill in the art to modify APA by providing fluid upstream of the shredder, taught to be desirable by both deVries and Uno et al.

Claims 4-7,9-13,15,16 are rejected under 35 U.S.C. 103(a) as being unpatentable over APA in view of either Garnier or Robertson. APA discloses the basic apparatus except for the use of a gate like mechanism to separate the material feed in. This could result in clogging of the shredder. Both Garnier and Robertson solve this problem by disclosing similar apparatus including the use of a gate like mechanism to separate the feed in of material. In order to reduce clogging potential, it would have been obvious for one ordinary skill in the art to modify APA by providing a gate like mechanism in the feed area, taught to be desirable by both Garnier and Robertson.

The exact design of the gate mechanism would then have been an obvious design choice only as it solves no stated problem.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over APA in view of either Garnier or Robertson as applied to claim 4 above, and further in view of either deVries or Uno et al. See the first paragraph for the use of deVries and Uno et al.
